

Please do not bow to the NAB. I'm a user of satellite radio and think it would be a shame if I couldn't get instant traffic & weather because of lobbying by the NAB. I find the traffic & weather on satellite radio better than public radio because it is always available without interruption. This new medium should be allowed to compete in the market place without the FCC playing favorites. The NAB needs to compete in the market without special government protections.

Sincerely,

Brian Hain
